WantX Reverse Marketplace

Complete Platform - Revised

Revised budget - supersedes quotation BV-Q-2026-WX1

QUOTATION NO.	DATE	VALID UNTIL	PREPARED FOR
BV-Q-2026-WX3	21 Oct 2026	05 Nov 2026	WantX (OPC) Private Limited

Overview

This is a revised quotation for the WantX reverse-marketplace platform, replacing our earlier quotation BV-Q-2026-WX1 of Rs 75,000. As the build has progressed, several parts of the platform have proved significantly more demanding than they appeared at the time of first scoping - in particular the natural-language understanding that reads a customer's want, the live matching and geo-search that puts the right businesses in front of them, the multi-user business panel with roles, and the Amazon affiliate integration. These need more engineering time, more paid infrastructure and a much longer testing cycle than the original estimate allowed for. We are therefore revising the budget upward by 30%, taking the total to Rs 97,500 excluding GST. Of this, Rs 30,000 has already been received. Rs 45,000 plus 18% GST - Rs 53,100 in total - is due now, and the remaining Rs 22,500 plus GST falls due on delivery. The scope, deliverables and support commitment remain exactly as agreed; only the commercials and schedule change.

Revised budget

- Original agreed budget (BV-Q-2026-WX1): Rs 75,000
- Revision for added engineering effort (+30%): + Rs 22,500
- Revised project total: Rs 97,500 (excluding GST)
- GST is charged at 18% on each invoice raised against this quotation

Payment schedule & amount due now

- Already received: Rs 30,000 (part payment, receipted)
- Due now: Rs 45,000 + 18% GST Rs 8,100 = Rs 53,100 payable
- Balance on delivery: Rs 22,500 + 18% GST Rs 4,050 = Rs 26,550 payable
- Total payable across the project: Rs 97,500 plus GST as applicable
- Payment can be made by bank transfer or UPI - details and QR are on this quotation

Why the budget is being revised

- Natural-language understanding - reading a customer's want in plain language and reliably extracting category, attributes, budget and location needs far more prompt engineering, tuning and fallback handling than a simple keyword match, plus paid AI/LLM usage on every request
- Live matching & geo-search - ranking nearby, relevant businesses in real time requires a proper search and geo-indexing layer, which is heavier to build and more expensive to run than a plain database query
- Multi-user business panel - organisation onboarding with Owner / Manager / Staff / Viewer roles means permission checks on every screen and action, effectively a second application alongside the customer app
- Category-driven dynamic fields - each category showing only its own relevant fields needs a configurable schema engine rather than fixed forms, and it drives the listing, matching and admin screens alike
- Amazon affiliate integration - API rate limits force a caching layer, and the routing logic between business listings and affiliate products added unforeseen work
- Extended testing cycle - verification flows, payments, roles and real-time matching across mobile, tablet and desktop take a considerably longer QA pass than first estimated

Scope being delivered (unchanged)

- Customer app - chat-based want posting, intent understanding, live matched listings & competing offers, comparison filters, nearby-first results, saved wants, in-app messaging, ratings and notifications
- Business panel - verified business login, organisation onboarding, multi-user roles, KPI dashboard, category-driven listings, incoming leads, offer builder with templates, listing management and analytics
- Affiliate / Amazon module - auto-fetch of products for everyday-goods queries, affiliate tagging, product cards in chat, caching and listing-vs-affiliate routing
- Admin panel - categories & dynamic field schema, business verification, listing & content moderation, affiliate settings, platform analytics, users, plans and payouts
- Design & technical - responsive UI/UX across mobile, tablet & desktop, secure authentication and roles, search & geo-matching, deployment and full handover
- Support - 1 year of bug fixing and non-functional issue support after go-live

Scope & requirements

Delivered by Bhama Vision

- Complete UI/UX design & development of every panel listed
- Database design and all data models
- Integration of the third-party services listed alongside
- Deployment to the client's hosting / server + handover
- Testing and bug fixing before launch
- Source code, documentation and a handover walkthrough
- 1 year of support for bugs & non-functional issues

On client's side (third-party)

- Domain and web hosting / cloud server (and its monthly cost)
- AI / LLM API subscription & usage charges for the chat assistant (e.g. OpenAI / AWS Bedrock)
- Amazon Associates account and affiliate-program approval
- Maps / geolocation API keys & usage (e.g. Google Maps)
- SMS / OTP verification service subscription
- WhatsApp Business API (if WhatsApp entry is required)
- Payment gateway account and its transaction fees
- App Store / Play Store developer accounts (if mobile apps are added)
- Any other paid API, plugin or third-party subscription

Terms & next steps

Payment: Rs 30,000 already received. Rs 45,000 + 18% GST (Rs 53,100) due now. Balance Rs 22,500 + GST (Rs 26,550) on delivery.

- This revised quotation supersedes quotation BV-Q-2026-WX1 of Rs 75,000. The revised project total is Rs 97,500, excluding GST.
- The 30% revision covers additional engineering effort, paid infrastructure and an extended testing cycle on the work already agreed - it does not add new features to the scope.
- GST is charged at 18% on each invoice raised against this quotation. Rs 45,000 plus GST of Rs 8,100, i.e. Rs 53,100, is payable now.
- All amounts are in Indian Rupees (INR) and are one-time for the design & development work quoted.
- All third-party subscriptions (hosting, domain, AI/LLM API, Amazon Associates, maps/geolocation, SMS/OTP, WhatsApp API, payment gateway) are arranged and paid for by the client directly.
- AI assistant and other API usage are recurring costs billed by the provider to the client based on usage.
- The revised delivery schedule is confirmed alongside this revision and runs from receipt of the amount now due.
- 1 year support covers bugs & errors only (things that stop working). It does not cover new features, content changes or redesigns, which are quoted separately.
